

# Metal Sheet Roll Forming Machine for Composite Panels

This roll forming machine manufactures composite panels. It shapes metal sheets into a specified profile using a series of rollers, ensuring consistent dimensions and high precision.

## Product Overview

### Precision Roll Forming Solution

This industrial roll forming machine is engineered specifically for the production of YX30-237.5 composite panels. Utilizing a series of precision-aligned rollers, the system gradually shapes metal sheets into consistent, high-quality roofing and walling profiles. It is designed to meet the rigorous demands of construction applications, ensuring dimensional accuracy and structural integrity for every panel produced.

## Technical Specifications

Model Designation	YX30-237.5
Primary Application	Roofing, Walling, Composite Panels
Forming Method	Sequential Roll Forming
