

Metal Sheet Straightening Machine

This industrial leveler is designed for flattening and straightening metal sheets or plates. It utilizes multiple rollers in a specific configuration to remove imperfections and ensure uniform thickness.

Overview

Industrial Metal Sheet Leveler

This heavy-duty industrial leveler is engineered for the precise flattening and straightening of metal sheets and plates. By utilizing a specialized configuration of multiple rollers, it effectively removes material imperfections and ensures uniform thickness across the workpiece. Equipped with robust drive systems and intuitive control panels, this machine enhances material quality and optimizes processing efficiency for demanding metalworking applications.

Technical Specifications

Key Features

- Multi-roller configuration
- Robust frame construction
- Precise control panel
- Uniform thickness adjustment

Machine Type	Industrial Metal Sheet Straightening Machine
Drive System	Hydraulic, Mechanical

Performance

Processing Capabilities

Flattening • Straightening • Imperfection Removal
