

Metal Strip Forming Machine

This metal strip forming machine is designed for precision forming of metal strips. It features a robust construction for durability and stability during operation.

Product Overview

Precision Metal Strip Shaping

The PX2000B is a semi-automatic metal strip shaping machine designed to transform flat strips into precise V or W profiles. Equipped with a variable frequency motor, the system features an automatic stop function upon completion, allowing a single operator to manage multiple units simultaneously. This robust machine ensures consistent quality and efficient output for industrial strip forming applications.

Performance Metrics

Production Capacity

400 kg

Daily Capacity

Operating Mode

Semi-automatic

Technical Specifications

Supported Strip Widths

- 2.5mm
- 3.2mm
- 4.5mm
- 6.4mm
- 7.2mm

Included Components

- One set of shaping molds

Profile Types

V-shaped, W-shaped

Motor Control

Variable frequency motor
