Metal Wire Drawing Machine

This wire drawing machine efficiently reduces the diameter of various metal wires. It features multiple drawing dies and capstans, along with an integrated control panel for precise adjustment of drawing speed and tension.

Overview

Precision Wire Drawing Solution

This industrial metal wire drawing machine is engineered for the high-precision reduction of metal wire diameters ranging from 1mm down to 0.09mm. Featuring robust construction and a reliable wire guiding system, it ensures consistent output for diverse manufacturing requirements. The unit includes integrated control systems for tension and speed management, making it an ideal choice for facilities requiring professional-grade wire processing.

Technical Specifications

Minimum Output Diameter	0.09 mm
Maximum Input Diameter	1 mm
Key Machine Features	Variable Speed Control, Integrated Tension Adjustment, Multi-stage Drawing Dies, Emergency Stop System

Operational Capabilities

Processing Efficiency

1 mm	0.09 mm
Max Input	Min Output

Compatible Materials

- Copper
- General Industrial Metal Wire
