

Metallic Audio Speaker Component

This metallic component is designed for use in audio devices. It features a cylindrical shape with a stepped design, suitable for loudspeakers, trumpets, or buzzers.

Product Overview

Precision Metallic Audio Component

This high-quality metallic speaker component is engineered for durability and reliable performance in demanding audio applications. Featuring a precise, machined cylindrical design with detailed grooves, it is optimized for use in loudspeakers, buzzer assemblies, or trumpet-style output systems. Its robust construction ensures longevity and consistent sound transmission in professional audio equipment.

Physical Attributes

Design Geometry

- Cylindrical body
- Stepped diameter design
- Grooved detailing
- Smooth circular top surface

Material Finish

Metallic, Machined, Durable

Application Specifications

Common Applications

Loudspeakers • Buzzer Assemblies • Trumpet Audio Systems
