

Metallic Mesh Rolls for Industrial Processing

These metallic mesh rolls are designed for industrial processing applications. The tightly woven mesh can be used for filtering, screening, or reinforcement.

Product Overview

Industrial Metallic Mesh Solutions

These metallic mesh rolls are engineered for demanding industrial processing, filtering, and reinforcement applications. Featuring a tightly woven structure, the material is designed to provide consistent performance in screening and manufacturing environments. The durable construction ensures reliability for heavy-duty industrial use.

Physical Properties

Material Type	Stainless Steel, Galvanized Steel
Form Factor	Tightly wound industrial roll

Applications

Primary Applications

- Industrial Filtering
- Screening Processes
- Structural Reinforcement
