

Metallic Mounting Disc with Central Cutout

This precision-engineered metallic disc is designed for mechanical systems. It features a central circular cutout and six evenly spaced mounting holes.

Product Overview

Precision-Engineered Mounting Disc

This metallic mounting disc is a precision-engineered component designed for high-performance mechanical systems. Featuring a central circular cutout and six evenly spaced mounting holes, it offers reliable alignment and secure fastening capabilities. Its durable metallic construction and machined surface finish ensure wear resistance and longevity in demanding industrial applications, such as braking systems or rotating machinery.

Technical Specifications

Mounting Holes	6
Surface Finish	Machined with radial brushing
Design Features	Central Cutout, Precision Alignment, Evenly Spaced Mounting

Application

Typical Applications

- Braking Systems
- Rotating Machinery
- Mechanical Fastening Assemblies
