

Metallic Space Heating Appliance

This is a warmer appliance. It is designed for space heating purposes and features a metallic construction with extending pipes.

Product Overview

Industrial Space Heating Solution

This metallic space heating appliance is engineered for reliable climate control in professional environments. Featuring a durable, reflective metallic body, the unit is constructed to withstand industrial use while providing efficient heat distribution. With its versatile dual-pipe configuration, this heater offers flexible installation options to suit various spatial requirements.

Technical Details

Design Components

- Rectangular main body
- Short straight extension pipe
- Long curved extension pipe

Material	Reflective Metal (Stainless Steel/Aluminum)
----------	---

Application

Primary Application	Space Heating, Industrial, Commercial
