

Metallurgical Engineering Construction General Contract

This is a general contract for construction projects related to metallurgical engineering. It is suitable for large-scale industrial facilities and complexes.

Service Overview

Comprehensive Metallurgical Contracting

We provide comprehensive general contracting services for large-scale metallurgical engineering projects. Our expertise spans the entire production lifecycle, including sintering, iron making, steel smelting, hot rolling, heavy plate production, and cold rolling processes. We deliver end-to-end solutions for complex industrial facilities, ensuring high-performance infrastructure and operational efficiency.

Core Capabilities

Process Expertise

Sintering, Iron Making, Steel Smelting, Hot Rolling, Heavy Plate Milling, Cold Rolling

Project References

Iron Making Facilities

- Blast furnace construction
- Blast furnace technical modifications
- High-capacity furnace installation

Steel Smelting & CCM

- Slab continuous casting machines (CCM)
- Bloom continuous casting machines
- Electrical furnace installations
- Converter projects

Rolling & Processing Facilities

- High-speed wire rod production lines
- Thin slab casting and rolling
- Heavy plate milling and processing
- Cold rolled sheet production lines
- Continuous annealing and galvanizing lines
