

Metallurgical Overhead Crane

This overhead crane is designed for handling molten metals in metallurgy and foundry applications. It features thermal insulation, heat-resistant paint, dual brakes, and dual limits to ensure safe operation in high-temperature environments.

Product Overview

Designed for Extreme Environments

The Metallurgical Single Girder Crane is engineered specifically for demanding foundry and metallurgical operations involving molten metals. Featuring a specialized thermal insulation layer and heat-resistant coating on the main beam, this crane ensures reliable performance in high-temperature environments up to 60°C. With a robust design, dual braking, and dual limit safety systems, it provides a secure and efficient solution for heavy-duty material handling.

Technical Specifications

Working Grade

A6

Lifting Capacity

5 t

Rated Load

Max Operating Temperature

60 °C

Safety & Design

Key Characteristics

- Compact structure
- High rigidity
- Simple operation
- Low noise
- High safety and reliability

Safety Features

Dual Brake System, Dual Limit Switches, Thermal Insulation, Heat Resistant Coating
