

Metalworking Machine Tool

This metalworking machine tool is designed for precision material removal. It features a robust frame, advanced control panel, and enclosed work area suitable for heavy-duty milling, drilling, or turning operations.

Overview

High-Precision Metalworking Solution

This industrial metalworking machine tool is engineered for precision material removal in demanding manufacturing environments. Featuring a robust construction and an enclosed work area, it ensures both operator safety and efficient chip containment during operation. Equipped with advanced digital controls and an integrated coolant system, this versatile unit is optimized for heavy-duty milling, drilling, and turning tasks.

Machine Features

Design Features

- Robust frame construction
- Enclosed work area
- Integrated coolant system
- Digital control panel interface

Machining Capabilities

Milling, Drilling, Turning
