

Microcomputer Line Protection Automation Unit

This automation unit is designed for microcomputer line protection. It features a digital display, keypad for input, and indicator lights.

Overview

Advanced Microcomputer Line Protection

The MPS 4000 is a comprehensive automation unit engineered for critical microcomputer line protection. This device seamlessly integrates control, monitoring, and protection functions, making it an essential component for industrial power systems and critical infrastructure. Featuring an intuitive digital display and keypad interface, it provides reliable oversight and operational efficiency for automated environments.

Technical Specifications

Model Number	MPS 4000-1105
Primary Function	Microcomputer Line Protection
Version	2

Features

Interface Type

Digital Display • Keypad Input • Indicator Lights

Key Capabilities

Control, Monitoring, Protection, Digital Display, Keypad Input
