

Microprocessor-Based Line Protection Device

This microprocessor-based line protection device is designed for monitoring and controlling electrical systems. It features a digital display, keypad, and indicator light.

Product Overview

Advanced Line Protection

The MPS 4000 is a sophisticated microprocessor-based integrated automation unit designed for precise line protection and electrical system management. Featuring an intuitive digital display, tactile keypad, and clear status indicators, it provides operators with real-time monitoring and control capabilities. This robust device is engineered to ensure reliability and efficiency in demanding industrial automation environments.

Technical Specifications

| | |
|--------------|---|
| Model Number | MPS 4000-1105 |
| Device Type | Microprocessor-Based Line Protection Unit |
| Version | 2 |

Features

Interface Components

- Digital Display
- Tactile Keypad
- Status Indicator Lights

Core Capabilities

Line Protection, Electrical Monitoring, System Control, Integrated Automation
