

Microwave Agricultural Product Drying Equipment

This microwave drying equipment is designed for efficient and uniform drying of agricultural products. It utilizes microwave technology for quick heating, drying, and sterilizing, ensuring products reach commercial sterility at low temperatures.

Product Overview

Industrial Microwave Drying & Sterilization

This industrial microwave equipment is designed for efficient, continuous processing of agricultural products such as grains and seeds. It offers a multi-purpose solution for desiccation, drying, and sterilization, ensuring uniform results while maintaining product quality. Built with durable stainless steel, the system provides a clean, safe, and energy-efficient alternative to traditional far-infrared drying methods.

Performance Features

Key Processing Capabilities

- Quick and even heating, drying, and sterilizing
- Low-temperature sterilization to commercial sterility standards
- Multi-purpose functionality (desiccation, drying, sterilization)
- Continuous conveyor belt processing

Energy Efficiency

30 %

Electricity Savings

Operational Benefits

Operational Advantages

Pollution-free, Small floor space, Easy to operate, Easy to control, Stainless steel construction
