

MIG 315F Welding Machine

The MIG-315F is a robust welding machine designed for MIG welding applications. Adjustable current and voltage settings allow for precise control during the welding process.

Overview

Professional Welding Solution

The MIG 315F is a versatile welding machine utilizing advanced inverter technology to ensure high power efficiency and minimal open circuit loss. Designed for professional use, it features touch arc introduction technology and complies with EMC standards for reliable, interference-free performance. Its compact and lightweight design makes it highly portable, while its multi-functionality supports TIG, MMA welding, and cutting applications.

Technical Specifications

Standards Compliance

EMC Standard

Supported Welding Processes

MIG, TIG, MMA, Cutting

Inverter Technology

Yes

Features

Key Features

- High power utilization rate
- Low open circuit loss
- Touch arc introduction technology
- Compact and lightweight design
- High efficiency

Controls & Operation

Control Interface
