

# Mineral Extraction Hydraulic Excavator

This high-performance excavator is designed for demanding mineral extraction and construction tasks. Featuring a robust hydraulic system, it delivers powerful digging and lifting capabilities.

## Overview

### High-Performance Excavation

This high-performance excavator is engineered specifically for demanding mineral extraction and large-scale construction tasks. It features a robust hydraulic system that delivers exceptional digging and lifting capabilities, supported by a reinforced bucket and durable chassis designed to withstand harsh operating environments. Additionally, the advanced engine technology balances power with efficient fuel consumption and reduced emissions, while the ergonomic cabin ensures operator comfort and productivity.

## Technical Specifications

Model Identifier	310E
Primary Applications	Mineral Extraction, Quarrying, Large-scale Construction

## Key Features

### Performance Highlights

#### 1 Robust

Hydraulic System

#### 1 Reinforced

Chassis Durability

### Cabin Features

- Excellent visibility
- Ergonomic controls
- Enhanced operator comfort
