

# Miniature Circuit Breaker for Overcurrent Protection

Miniature circuit breakers protect electrical circuits from overcurrents caused by overload or short circuits. These MCBs are available in single, double, triple, and quadruple pole configurations and are designed for DIN rail mounting.

## ADDITIONAL IMAGES

## Product Overview

### Reliable Circuit Protection

This Miniature Circuit Breaker (MCB) is an essential electromechanical device engineered to safeguard electrical installations from overcurrent conditions, including both overloads and short circuits. It is designed for versatile application across residential, commercial, and industrial environments, ensuring reliable performance and system safety. With a compact design suitable for DIN rail mounting, it integrates seamlessly into modern distribution boards and consumer units.

## Technical Specifications

### Breaking Capacity

**4500 A**

Rated Breaking Capacity

Rated Voltage	230/400V
Tripping Characteristics	C16, C20
Mounting	DIN Rail

## Compliance & Standards

### Standards

- IEC 60898-1
- GB/T 10963.1

### Certifications

CE
