

# Miniature Incandescent Light Bulb

This miniature incandescent light bulb is commonly used in automotive lighting and small electronic devices. It features a clear glass enclosure, a bayonet base, and a visible filament that emits light when heated.

## Product Overview

### Reliable Miniature Illumination

This miniature incandescent light bulb is engineered for consistent performance in diverse applications, ranging from automotive dashboard indicators to small electronic devices. Featuring a durable clear glass enclosure and a secure bayonet base, it is designed for easy installation and reliable electrical contact. The visible filament construction ensures immediate illumination when powered, making it a dependable choice for critical signaling and lighting needs.

## Technical Specifications

Base Type	Bayonet
Technology	Incandescent
Construction Materials	Clear Glass, Metal Base

## Applications

### Common Applications

- Automotive lighting
- Indicator lights
- Small electronic devices
