

Miniature Surface Mount Microphones

These are miniature microphones designed for surface mounting. They are packaged on carrier strips for automated assembly onto printed circuit boards.

Product Overview

Miniature Surface Mount Microphones

These miniature surface-mount microphones are precision-engineered components designed for seamless integration into automated electronics assembly lines. Featuring a compact form factor suitable for high-density PCB layouts, they ensure reliable audio capture in a variety of professional applications. The components are supplied on carrier tapes, facilitating efficient pick-and-place manufacturing processes.

Technical Specifications

Component Type

Audio Transducer • SMD Component

Best For

- Automated PCB Assembly
- Compact Electronic Devices
- Audio Input Systems

Mounting Style

Surface Mount (SMD)

Packaging

Carrier Tape
