

MMA-250 Inverter Stick Welding Machine

The MMA-250 is a compact and portable inverter welding machine designed for MMA welding. It features a digital display for precise current control and thermal overload protection.

Product Overview

Compact Power for Professional Welding

The MMA-250 is a compact and portable inverter welding machine engineered for reliable Manual Metal Arc (MMA) welding. Utilizing advanced IGBT technology, it delivers stable arc performance and excellent welding characteristics suitable for maintenance, repair, and light fabrication tasks. Designed with a robust construction and an efficient cooling system, this machine ensures consistent operation in both workshop and on-site environments.

Technical Specifications

Core Technology

IGBT Inverter

Welding Process

Manual Metal Arc (MMA)

Features & Design

Design Highlights

- Compact and portable design
- Digital display for precise control
- Thermal overload protection
- Effective ventilation cooling system
- Durable housing

Adjustable Parameters

Adjustable Hot Start, Arc Force Control
