

MMA-300 DC Inverter Welder

The MMA-300 is a DC inverter welder designed for manual metal arc (MMA) welding. This compact and portable unit features adjustable settings for optimal welding performance.

Product Overview

Compact and portable MMA-300 design suitable for professional and DIY welding projects.

MMA-300 DC Inverter Welder

The MMA-300 is a high-performance DC inverter welder engineered for manual metal arc (MMA) welding applications. Utilizing advanced IGBT technology, this unit delivers stable, efficient welding performance with reliable arc starting. Its compact and portable design makes it an ideal solution for both professional workshop environments and on-site repair tasks, offering durability and consistent weld quality.

Technical Specifications

Features adjustable current control for optimal welding performance on mild steel, stainless steel, and cast iron.

Built with durable materials for long-lasting performance in demanding environments.

Core Technology

IGBT • DC Inverter

Welder Type

MMA Inverter Welder

Available Arc Current

140A, 160A, 180A, 200A

Pulse Frequency

50-60Hz

General Information

Place of Origin	Zhejiang, China
Condition	New
