

MMA-315I Double Module Inverter Welding Machine

This double module inverter welding machine is designed for MMA (Manual Metal Arc) welding. It features adjustable knobs for precise control over welding parameters and an LCD display.

Product Overview

Professional MMA Inverter Welding Machine

The MMA-315I is a high-performance double module inverter welding machine engineered for demanding Manual Metal Arc (MMA) welding applications. Designed with precision in mind, it features an intuitive interface with adjustable control knobs and an LCD display for monitoring welding parameters. Built for reliability and safety, the unit incorporates advanced features like Voltage Reduction Device (VRD) and O.C. indicators, making it a robust solution for professional welding tasks.

Technical Specifications

Welding Process	MMA (Manual Metal Arc)
Construction	Double Module Inverter
Technology	IGBT Module

Safety & Features

Control Interface

- Adjustable welding parameters
- LCD display
- Arc force adjustment

Safety Features

VRD (Voltage Reduction Device), O.C (Open Circuit Indicator)
