

Mobile Abrasive Blasting Unit

This mobile unit features a pressurized tank for efficient media delivery and an adjustable air pressure regulator for precise control. Equipped with wheels and a handle, it is designed for portability and maneuverability in various surface preparation tasks.

Product Overview

Professional Mobile Abrasive Blasting Solution

This mobile abrasive blasting unit utilizes high-speed compressed air to propel abrasive particles against surfaces for superior cleaning and preparation. By converting kinetic energy into effective surface work, it enables the efficient removal of rust, paint, and scale from various materials. Designed for professional use, it offers precise pressure control and high maneuverability for diverse industrial applications.

Technical Specifications

Compatible Particle Diameter

1 mm
Minimum

4 mm
Maximum

Surface Preparation Applications

Rust Removal, Paint Stripping, Scale Removal, Glass Etching, Masonry Cleaning

Design and Utility

Key Features

- Pressurized tank for efficient media delivery
- Adjustable air pressure regulator
- Integrated pressure gauge for precision
- Easy-fill media funnel
- Heavy-duty wheels and handle for portability
