

# Mobile Anesthesia Machine with Integrated Monitoring

The anesthesia machine is designed for the precise delivery of anesthetic gases during surgical procedures. It features integrated monitoring capabilities, vaporizers, and a breathing circuit for controlled ventilation.

## Product Overview

### Advanced Anesthesia Delivery

The 904E Anesthesia Machine is a sophisticated medical device engineered for the precise and reliable delivery of anesthetic gases during complex surgical procedures. Featuring a compact, mobile design, it integrates essential storage drawers and advanced monitoring capabilities, including real-time gas concentration displays and pressure gauges. This system is designed for optimal patient safety and efficient anesthetic management in demanding clinical environments.

## Technical Specifications

### System Components

- Integrated Vaporizers for volatile anesthetic agents
- Integrated Breathing circuit for controlled ventilation
- Integrated Storage drawers
- Gas concentration displays
- Pressure gauges

### Design Features

Mobile Design, Compact Footprint, Ergonomic Interface, Integrated Monitoring

### Flow Meter

Integrated Flow-Meter system
