

Mobile Asphalt Mixing Plant

This mobile asphalt plant allows for batch mixing with a small footprint. It features precise weighing and screening capabilities and is designed for ease of relocation.

Overview

Compact Road Construction Solution

The QLB series mobile asphalt mixing plants are specifically engineered for small to medium-sized road infrastructure projects. By combining the precision of batch mixing with the convenience of a compact, towerless design, these plants allow for rapid deployment and easy relocation. Their low center of gravity and minimal footprint ensure high performance in diverse job site conditions.

Performance Specifications

Production Capacity

10 t/h

Minimum Output

80 t/h

Maximum Output

Operational Precision

Precise Weighing • Accurate Screening • Consistent Temperature Control

Mixing Technology

Batch Mix, Drum Mix Hybrid

Design and Mobility

Key Mobility Advantages

- Towerless structural design
- Low center of gravity
- Minimal foundation requirements
- Compact footprint for small job sites

Maximum Tower Height

4 m
