Overview

High-Efficiency Mobile Asphalt Production

The IAM series super mobile asphalt mixing plant is engineered for maximum mobility and rapid deployment, allowing for reassembly within hours. Designed for medium to high-end road construction projects, it integrates essential components into one or two mobile units, minimizing foundation requirements. This system delivers high-quality asphalt mixtures with excellent dust filtration performance, making it a sustainable and cost-effective choice for long-distance projects.

Performance Metrics

Production Capacity

60 t/h

Minimum Capacity

140 t/h

Maximum Capacity

Available Models

IAM80, IAM120

Technical Features

Core Components

- Counterflow drying drum
- Double-shaft continuous mixer
- House bag dust filter

Operational Highlights

Quick Assembly • Low Labor Cost • High Mobility • Dust Filter Performance

Application & Deployment

Suitable Applications

- Medium to high-end road construction
- Long-distance road projects
- Remote construction sites
- Temporary paving projects

Popular Markets

South America, Middle East, Southeast Asia
