

Mobile Asphalt Mixing Plant

This mobile asphalt mixing plant integrates all components into movable units for rapid assembly. It offers efficient fuel consumption and eliminates the need for a foundation, making it suitable for various road-building projects.

Overview

IAP Series Mobile Asphalt Plant

The IAP Series represents the most advanced technology for mobile asphalt production, designed as a highly compact and efficient single-unit solution. Engineered for flexibility and hypermobility, this plant eliminates the need for complex foundations, significantly reducing setup time and labor costs. It offers superior fuel efficiency, excellent operational ergonomics, and safety, making it an ideal choice for diverse road construction and maintenance projects.

Key Features

Operational Benefits

- Low transportation costs
- Minimized installation area
- Fast and easy setup
- High fuel efficiency
- Excellent production visibility
- Ergonomic operation controls

Mobility & Design

Mobile Unit, Folding Brackets, No Foundation Required, Rapid Relocation, Modular Chassis

Technical Capabilities

Integrated Functions

- Aggregate feeding
- Heating
- Mixing
- Asphalt addition
- Bitumen storage
