

Mobile C-Arm X-Ray System

This mobile C-arm X-ray system is designed for real-time imaging during surgical interventions. It provides critical visual support to medical personnel during diagnostic procedures.

Product Overview

Mobile C-Arm X-Ray System

The Mobile C-Arm X-Ray System is a versatile medical imaging solution designed for real-time diagnostic and surgical interventions. Engineered for high-performance in clinical environments, this system supports a wide range of procedures including surgical guidance and diagnostic imaging. Its mobile design allows for efficient deployment across operating theaters and medical facilities, ensuring critical imaging capabilities are available where needed most.

Technical Capabilities

Clinical Applications

Surgical Intervention, Real-time Imaging, Diagnostic Procedures

System Components

System Components

- C-Arm X-Ray Unit
- Patient Table
- Imaging Monitors

Compliance and Standards

Regional Coverage

27 Provinces • 200+ Hospitals
