

Mobile Concrete Pump Truck

This mobile concrete pump truck is designed for efficient concrete delivery on construction sites. It allows for precise and rapid placement of concrete, minimizing labor and material waste.

Product Overview

High-Efficiency Concrete Placement

This mobile concrete pump truck is engineered for precision and reliability in demanding construction environments. Featuring a multi-section boom system, it allows for accurate concrete delivery across complex job sites, including foundations and large-scale infrastructure projects. Its robust design ensures consistent performance, helping construction teams maintain productivity and achieve high-quality results in concrete pouring operations.

Technical Capabilities

Boom Configuration	Multi-section boom
Primary Applications	Concrete Foundations, Infrastructure Development, Large-Scale Construction, Concrete Poured Pads

Operational Metrics

Performance Highlights

32 m
Vertical Reach
