

Mobile Crushing Plant

The mobile crushing plant integrates a feeding machine, belt conveyor and vibrating screen. It is designed for efficient on-site material processing, enhancing productivity and reducing transportation costs.

Product Overview

Versatile Mobile Crushing Solution

This mobile crushing plant is a flexible, semi-vehicle-mounted machine designed for efficient on-site material processing. It integrates crushing, feeding, conveying, and screening into a single, mobile unit, significantly reducing transportation and setup costs. Ideal for construction waste disposal, mining, and aggregate production, it handles a wide range of materials including granite, limestone, and various ores.

Technical Features

Integrated Components

- Feeding machine
- Belt conveyor
- Vibrating screen
- Control box with electromotor

Available Crusher Series

Jaw Crusher, Impact Crusher, Cone Crusher, Vertical Shaft Impact Crusher

Operational Capabilities

Mobility & Transport

- Rubber-tyred mobile design
- Steering axis of traction for highway transport
- Vehicle-mounted installation and support
- Fast site penetration

Suitable Materials

Cobble, Granite, Basalt, Andesite, Iron Ore, Limestone, Quartz Stone, Diabase, Gold Ore, Copper Ore
