

# Mobile Elevator Platform

This elevator platform is designed for the vertical transportation of materials and personnel in construction and industrial settings. It features a robust steel frame construction, safety railings, and a lifting mechanism for secure and efficient operation.

## ADDITIONAL IMAGES

## Product Overview

### Specialized Elevator Installation Platform

The ZLP(T) series suspended platform is engineered specifically for the unique demands of elevator shaft installation and narrow worksite operations. Designed for both stability and safety, this system features side-mounted wheels that guide the platform against walls, ensuring smooth vertical movement. Available in one-deck and double-deck configurations, it provides a versatile solution for transporting personnel and materials in construction and industrial environments.

## Technical Specifications

### Configuration Options

- One-deck platform
- Double-deck platform

### Key Components

- Electrical control box
- Dual-motor lifting system
- Access ladder
- Robust steel frame

### Safety Features

Emergency Stop, Overload Protection, Wall-Stabilizing Wheels, Safety Railings

## Applications

### Primary Applications

Elevator Installation • Vertical Transportation • Construction Sites • Industrial Maintenance
