

Mobile Impact Crusher Plant

This mobile impact crusher plant provides a versatile solution for on-site crushing and material processing. The self-contained unit features an impact crusher, screening system, and conveyor system on a mobile chassis.

Overview

High-Performance Mobile Impact Crushing

This mobile impact crusher plant is engineered for heavy-duty material processing, featuring a robust rotor and a large crushing cavity designed for high-capacity output. The unit offers exceptional versatility with self-tracking capabilities and intelligent wireless remote control, allowing for rapid deployment and easy transport. Maintenance is simplified through a hydraulic opening system for the crusher's back frame, ensuring efficient operation in demanding quarrying, mining, and construction environments.

Technical Specifications

Crusher Capabilities

- Super heavy-duty rotor
- High wear-resistant material construction
- Large crushing cavity
- Adjustable feeding size
- Stable product output
- Excellent material shape

Maintenance & Mobility

- Hydraulic device for back frame opening
- Disassembleable side discharge belt
- Self-track walking system
- Intelligent wireless remote control
- Fast transition operations

Customization

Available Add-ons

Iron remover, Return system, Feeding system
