

Mobile Pallet-Free Block Making Machine

This mobile machine efficiently produces concrete blocks without the need for pallets. Its robust design and advanced systems ensure high productivity and ease of maintenance.

Product Overview

Efficiency in Concrete Production

The Mobile Pallet-Free Block Making Machine is a reliable and flexible solution designed for the mass production of high-quality concrete blocks, including hollow, solid, foundation, and chimney blocks. Featuring a robust design suitable for both open-area and indoor operation, it offers versatile production cycles directly onto the floor. This machine ensures high performance and longevity through proven engineering, supported by interchangeable molds and advanced hydraulic systems.

Technical Features

Product Applications

- Hollow blocks
- Solid blocks
- Foundation blocks
- Chimney blocks
- Paving stones
- Curbstones

Production Method	Pallet-free, single-layer production
Operational Mobility	Vulkollan-coated wheels, Hydraulic shunting wheel, Direct-to-floor casting

Operational Metrics

Performance Highlights

6000 units

Global Installations

Execution Types

Semi-automatic • Fully automatic
