

Mobile Phone Camera Module

This compact camera module is designed for integration into mobile phones and other portable devices. It is an essential component for capturing images and videos in mobile devices.

Overview

High-Performance Mobile Camera Modules

These compact camera modules are precision-engineered for seamless integration into mobile phones and portable electronic devices. Featuring versatile flex cable interfaces and diverse lens configurations, they are designed to deliver reliable imaging performance. The collection includes a wide range of specific module variants, ensuring compatibility with various device architectures and technical requirements.

Technical Specifications

Key Component Features

- Compact form factor for space-constrained integration
- Flexible cable interface for versatile mounting
- Diverse lens configurations for varied optical performance
- Standardized alphanumeric identification for inventory management

Revision and Build Data

Identifier	Revision/Code
DL130	REV:2-050903
U-0543	REV 1
General	050922
General	051013
