

Mobile Phone with Electronic Map Navigation and Stylus

This mobile phone features electronic map navigation and a four-hole camera. It includes a stylus for precise on-screen interaction and a numeric keypad for traditional input.

Product Overview

Professional Navigation & Interaction

This mobile device is engineered for users who require precise navigation and multimedia capabilities in a compact, durable form factor. It features an integrated electronic map navigation system, allowing for efficient route planning and location tracking. The inclusion of a dedicated stylus ensures accurate on-screen interaction, while the traditional numeric keypad provides reliable input for professional use.
