

Mobile Physical Measuring Unit

This is a mobile physical measuring unit. It is equipped with a satellite dish for data transmission or reception.

Overview

Mobile Physical Measuring Unit

The Mobile Physical Measuring Unit is a specialized vehicle designed for field operations requiring data collection and remote communication. Equipped with integrated satellite technology, this unit enables real-time data transmission and reception in remote locations. It is an ideal solution for research, environmental monitoring, and field-based physical measurement tasks.

Key Features

Communication

Satellite Enabled • Data Transmission • Data Reception

Mobility & Deployment

Mobile Platform, Field-Ready, Remote Deployment

Technical Specifications

Primary Application

Physical measurement and data monitoring

Unit Configuration

Mobile vehicle-based system
