

Mobile Sand Blasting Unit

This mobile sand blasting unit is designed for efficient surface preparation. It is equipped with a transparent viewing chamber to monitor media levels and a safety valve for pressure regulation.

Product Overview

Mobile Surface Preparation Solution

This mobile sand blasting unit leverages high-speed compressed air to transport abrasive particles, effectively transforming kinetic energy into surface cleaning power. It is engineered for professional surface preparation, removing impurities to enhance the quality of various workpieces. Designed for versatility and mobility, the system is an essential tool for workshop environments requiring high-performance material cleaning.

Technical Specifications

Abrasive Particle Size

1 mm

Minimum Diameter

4 mm

Maximum Diameter

Key Operational Features

Adjustable Pressure, Safety Valve, Transparent Media Monitoring, Mobile Wheel-Mounted Design

Application Method

Compressed air-driven abrasive flow
