

Mobile Vertical Shaft Impact Crusher

The mobile vertical shaft impact crusher is a movable machine equipped with a screening device. It is optimized for high working efficiency and uniform product granularity.

Product Overview

Mobile Vertical Shaft Impact Crusher

The Mobile Vertical Shaft Impact Stone Crusher is a high-efficiency crushing solution designed for versatility and rapid deployment. Featuring a rubber-tyred mobile platform, this plant eliminates the need for complex site installation, allowing operations to commence immediately upon arrival. Its optimized design ensures high working efficiency and uniform product granularity, making it an essential component for modern stone crushing production lines.

Key Features

System Compatibility

- Connects with moving conveyors
- Compatible with mobile screening units
- Ideal for stone crushing production lines

Mobility & Setup

Rubber-tyred, Mobile, No installation required, Rapid deployment

Technical Specifications

Primary Applications

Aggregate production • Road construction • Mining

Technology Standard

German technology

Suitable Materials

Granite, Basalt, Limestone, River pebbles
