

Modular Air Bearing Transporter System

Air casters facilitate the effortless handling of loads regardless of size or shape. This modular system employs compressed air to establish a thin film, enabling nearly frictionless movement.

Overview

Modular Air Bearing Transporter System

This modular air bearing transporter system is designed for the efficient movement of heavy-duty loads exceeding ten tons. Utilizing advanced air caster technology, the system creates a near-frictionless film to move loads of any size or shape with ease and precision. The modular design allows for flexible configuration, enabling operators to place individual modules under heavy objects to maintain balance and stability during transport.

Performance & Capacity

System Performance

1998 Year

Professional Manufacturing Since

50 Global

Countries Served

Load Capacity

10 tons

Technical Specifications

Included Accessories

- Control console
- High lift air bearings
- Remote control system
- 4 or 6 button control interface

Ideal Applications

Aircraft Manufacturing • Heavy Machinery Relocation • Cleanroom Environments

Configuration

Modular, Synchronized Lifting, Heavy Duty
