

Modular Air Casters for Heavy Load Movement

Modular air casters enable easy and precise movement of heavy loads. Compressed air creates a thin air layer between the load and the floor, effectively floating the load and reducing friction.

Product Overview

Modular Air Caster Systems

Modular air casters offer a professional-grade solution for moving heavy loads with precision and ease. By utilizing compressed air to create a thin, frictionless layer between the equipment and the floor, these systems allow for smooth, multi-directional movement. This technology is ideal for industrial environments where heavy machinery requires safe, efficient relocation without risking damage to floors or the load itself.

Operational Features

Movement Capability

Omni-directional • Frictionless • Heavy Load Support

Ideal Applications

- Factory floor equipment relocation
- Warehouse machinery positioning
- Sensitive heavy load transport

Technical Specifications

Design Type	Modular
Production Heritage	20 Years
