

Modular Air Handling Unit for Climate Control

This modular air handling unit is designed for industrial and commercial applications. It features filtration, heating/cooling coils, and a fan section to provide conditioned air suitable for large spaces requiring precise temperature and humidity control.

Overview

Modular Climate Control Solution

This modular air handling unit is engineered for demanding industrial and commercial environments requiring precise climate regulation. Featuring a robust, insulated enclosure, the system integrates advanced filtration, heating and cooling coils, and high-efficiency fan sections. Designed for seamless integration with building management systems, it provides reliable temperature and humidity control for large-scale spaces.

Technical Features

Integrated Components

- Filtration System
- Heating Coils
- Cooling Coils
- Fan Section

System Integration

Building Management System (BMS) Compatible

Design Configuration

Modular

Primary Applications

Industrial, Commercial, Large Spaces

Construction

Enclosure Build

Robust Insulated Enclosure

Maintenance Access

Yes
