

Modular Connector Terminal Blocks

These modular connector terminal blocks are designed for secure wire terminations. They are available in various configurations, suitable for a range of wiring needs in industrial and commercial environments, and provide an organized wiring solution.

Product Overview

Modular Connector Terminal Blocks

The KF-KM series modular connector terminal blocks are engineered for versatile electrical connection applications in industrial and commercial environments. These blocks feature a robust construction designed to ensure secure wire terminations and long-term connection stability. With multiple configurations available, they provide a neat, organized, and efficient solution for wiring needs in control panels, distribution boards, and various electrical equipment.

Available Models

KF-KM-1, KF-KM-2, KF-KM-3, KF-KM-4

Technical Specifications

Suitable Applications

- Control panels
- Distribution boards
- General electrical equipment

Key Design Features

Modular Design • Robust Construction • Secure Termination • Easy Installation
