

Modular Frame Scaffolding System

This modular frame scaffolding system is designed for construction and maintenance applications. Constructed from galvanized steel, it offers corrosion resistance, durability, and a safe working platform at different heights.

Product Overview

Modular Frame Scaffolding System

This modular frame scaffolding system is engineered for professional construction and maintenance applications. Constructed from high-quality galvanized steel, it offers exceptional corrosion resistance and long-term durability in various environmental conditions. The design prioritizes efficiency with a lightweight build for easy transport and assembly, while adjustable base plates ensure stability on uneven ground.

Technical Specifications

Safety Standards

Industry Compliant

Primary Applications

- Construction
- Maintenance

Material

Galvanized Steel

Key Features

Corrosion Resistant, Lightweight, Modular Design, Adjustable Base
