

Modular Frame Scaffolding System

This frame scaffolding system is engineered for construction and maintenance applications. The modular design enables customized configurations, ensuring a stable platform for various project needs.

Product Overview

Modular Frame Scaffolding System

This modular frame scaffolding system is engineered for versatile construction and maintenance applications, providing a safe and stable working platform for elevated tasks. Constructed from high-strength steel, the system ensures maximum load-bearing capacity and long-lasting performance in demanding environments. Its modular design allows for easy assembly and disassembly, enabling customized configurations to suit a wide variety of project requirements for both indoor and outdoor use.

Technical Specifications

Usage Environment

Indoor • Outdoor

Applications

- Construction
- Maintenance
- Elevated Work Platforms

Material

High-strength steel

Design Features

Modular, Easy Assembly, High Load-Bearing
