

Modular Frame System Scaffolding

This frame system scaffolding is constructed from heavy-duty steel, providing a stable and secure platform. The modular design allows for easy assembly and customization for various projects.

Product Overview

Modular Frame System Scaffolding

This robust and durable frame system scaffolding is engineered for demanding industrial and construction environments. Its modular design ensures easy assembly and high adaptability, allowing for customization to meet specific project requirements. Built from heavy-duty steel with a corrosion-resistant finish, it provides a stable and secure platform for both workers and materials.

Technical Specifications

Material	Heavy-duty steel
Surface Finish	Corrosion-resistant

Key Features

Safety & Design Features

- Modular design for easy assembly
- Reinforced joints for structural integrity
- Adjustable legs for leveling on uneven surfaces

Applications

Typical Applications	Construction, Industrial Maintenance, Repair Projects
----------------------	---
