

Modular Network Communication Interface

This network communication device integrates within a communication system. It facilitates data transmission and power management through its modular design.

Product Overview

Modular Network Communication Interface

This modular network communication interface is designed for seamless integration into complex communication systems. It features a robust, adaptable design with a circular base and integrated metallic contacts for reliable connectivity. The unit includes a dedicated battery holder, ensuring consistent power management and operational stability for data transmission tasks.

Physical Characteristics

Construction	Modular
Material Finish	Black plastic
Design Features	Circular base, Metallic contacts, Integrated battery holder

Technical Specifications

Core Functions

- Data transmission
- Power management
- System integration

Maintenance	Yes
-------------	-----
