

Modular Rack Mount Network Communication Device

This modular network communication device is designed for rack mounting. It features multiple connection ports and indicator LEDs for monitoring operational status.

Overview

High-Performance Network Communication

This modular rack-mount communication device is engineered for professional telecommunications and data networking infrastructure. Designed for seamless integration into standard rack environments, it provides reliable connectivity and real-time operational monitoring. The unit features dedicated status indicators for multiple channels, ensuring efficient network management and troubleshooting.

Technical Specifications

Primary Applications

- Telecommunications
- Data Networking Infrastructure

Model Number	G11030-1A
Mounting Type	Rack Mount
Indicator LEDs	Status, Channel 1, Channel 2, TX, RX
