

Mold Cooling Couplings and Fittings

Precision-engineered mold couplings and cooling accessories are designed for efficient thermal management in injection molding processes. These fittings facilitate seamless integration with existing cooling systems, providing secure and leak-free connections.

Overview

Precision Thermal Management

These mold couplings and cooling accessories are engineered for efficient thermal management within injection molding processes. Designed to maintain optimal mold temperatures, they ensure consistent part quality and help reduce cycle times. Their durable construction and secure, leak-free design facilitate seamless integration into existing cooling systems for enhanced industrial productivity.

Certifications

Quality Standards

ISO 9001:2008

Applications

Industry Applications

- Automotive parts mold
- Semiconductor mold
- IC connector
- Lead frame electrical connection
- Motor fixed rotor
- Precision mold spare parts

Performance

Operational Benefits

Consistent Part Quality • Reduced Cycle Times • Leak-Free Connections • High-Grade Durability
