

Molded Brake Lining

These molded brake linings come in asbestos and non-asbestos options. They are made to fit well and work reliably in different brake systems.

Product Overview

Reliable Braking Solutions

These molded brake linings are engineered for consistent and reliable braking performance in diverse environments. Manufactured with precise dimensions and tolerances, they ensure an optimal fit for various braking systems. The uniform density of the molded construction promotes extended service life and effective noise reduction, making them a dependable choice for demanding applications.

Technical Specifications

Available Formulations

- Asbestos
- Non-asbestos

Performance Features

Key Benefits

Uniform Density, Noise Reduction, Extended Service Life, Precise Tolerances

Applications

Suitable Sectors

Industrial • Automotive
