

Molded Case Circuit Breaker for Electrical System Protection

This molded case circuit breaker is designed to protect electrical circuits in industrial applications. It offers adjustable trip settings for customized overload and short-circuit protection.

Overview

Industrial Circuit Protection

This Molded Case Circuit Breaker (MCCB) is engineered for reliable overload and short-circuit protection in demanding electrical systems. Designed with robust construction for industrial applications, it ensures the safety and stability of power distribution circuits. The unit features adjustable trip settings, allowing for customized protection profiles tailored to specific operational requirements.

Technical Specifications

Key Protection Features

- Overload Protection
- Short-Circuit Protection
- Adjustable Trip Settings

Model Number	NS 100-CP/3
Application	Industrial, Power Distribution, Circuit Protection

Compliance

Compliance

Industry Standard Compliant
